FORT WORTH BRANCH  
U. S. DEPT. OF AGRICULTURE LIBRARY  
FORT WORTH 2, TEXAS

Vol. 4, No. 6.

January 1946.

### NEW LOCATION FOR THE LIBRARY

After January 15 your library will be officially known as Little Rock Branch instead of Fort Worth Branch. We are moving the Fort Worth Branch of the USDA Library to Little Rock, Arkansas for consolidation with our Sub-Branch Library there. The library will be located on the sixth floor of the Donaghey Building at Seventh and Main.

We shall continue to serve you as we have in the past. For most of you the only change will be simply a change of address. Our new address will be Little Rock Branch, U. S. Dept. of Agriculture Library, Donaghey Building, Little Rock, Arkansas.

It is our hope that the library can be of even greater service to you in 1946 than it has been in the past. Give us a chance, and we shall do the best we can to help you.

THE LIBRARY STAFF WISHES YOU A VERY HAPPY NEW YEAR!

### AMONG THE NEW LIBRARY BOOKS

AGRICULTURAL PRICE CONTROL, by G. S. Shepherd. Iowa State College Press, 1945. 361p. 284.3 Sh4A

In this book Professor Shepherd's main concern is with price supports. He explains the major price-supporting programs which have been undertaken in this country and appraises their effectiveness. The book contains 29 chapters grouped under four headings: (1) stabilizing agricultural prices by controlling the market supplies of farm products; (2) stabilizing agricultural prices by controlling the demand for farm products; (3) local and regional programs for controlling market supply and demands; and (4) the problem of controlling agricultural prices after World War II.

In the final chapter Shepherd sets up eight propositions concerning agricultural price controls which he feels are warranted by his analysis of past experiments.

This book is a valuable contribution to the growing literature on government administered prices of agricultural products. Shepherd's descriptions of past control programs are concise and accurate, and his appraisals of their effects upon farm prices and returns are, I think, essentially correct. One

of the important aspects of agricultural price control which Shepherd does not cover at all adequately, however, is the effects of the various programs upon national income and employment. From a review by H. R. Wellman in the Journal of Farm Economics, November 1945.

ADULT EDUCATION FOR DEMOCRACY IN FAMILY LIFE, by Mary S. Lyle. Iowa State College Press, 1944. 158p. 275 L98

The author of this book maintains that adult education can make a significant contribution to more truly democratic living through home economics classes. The study is based throughout upon the theory that democratic living must find a place in daily practices of both the home and the school if the underlying philosophy of the democratic way of life is to be preserved. The set of criteria used as the yardstick for measuring democratic living among the 120 families studied suggests to teachers and leaders of adult groups specific ways in which democratic experiencing may be a part of everyday family life. From a review in Practical Home Economics.

FARMERS OF THE WORLD, by Edmund deS. Brunner and others. Columbia University Press, 1945. 208p. 275.2 B33

The primary aim of this book is to discuss the most effective general approach which a government or a private agency can use in helping rural people solve their everyday problems. This approach is commonly called Extension. Considerable space is devoted to specific ways and means of carrying on extension but these are incidental to the primary aim. The basis of discussion throughout is within the democratic framework; namely, that the end of all extension activity is the growth and improvement of the individual rather than the fashioning of automatons who merely obey orders handed down from above.

As the title of the book suggests, the authors deal with agricultural extension in the nonliterate societies of the Pacific Islands, of the peasant societies of China, India, Arabia, the Balkans, Latin America, and of Euro-American society.

HANDBOOK OF PEST CONTROL, by Arnold Mallis. MacNair-Dorland, 1945. - 566p. 423 M292

The sub-title of this book is "The Behavior, Life History, and Control of Household Pests." Some of the pests considered are: rats and mice, silverfish, cockroaches, crickets, termites, dry rot fungi, beetles, bedbugs, clothes moths, ants, bees and wasps, spiders, lice, fleas, flies and mosquitoes, mites, ticks.

SIXTY MILLION JOBS, by Henry A. Wallace. Reynal and Hitchcock, 1945. 216p. 280.12 W152S

"This book is a philosophy of freedom, a declaration of American interdependence, a program for full employment written by one of the great Americans of our time. It shows why sixty million jobs and a two hundred billion dollar annual income by 1950 are essential to preserve our free enterprise system. It shows how these objectives can and must be realized." From book jacket.

WHAT IS FARMING? by G. E. Larson and W. M. Teller. Van Nostrand, 1945. 410p. 313. L32

"Here is a book which spreads out the broad canvas of farming in the United States and Alaska--big farms and little farms--the growing of potatoes, oranges, cotton, corn, cattle, hogs, or whatever--from Maine to California and the Great Lakes to the Gulf. What Is Farming? offers clues to particular lines in farming but it can also help you to see the farm job as a whole and find your way around with less of the error of trial." Originally prepared for the United States Armed Forces Institute and revised and adapted for civilian use.
